

INDUSTRIAL METALFLUID

DESCRIPTION

METALFLUID is a very thin, high quality lubricant for the lubrication of metal casts. It protects the metal casts against corrosion. It contains special additives for accretion in the surfaces.

APPLICATIONS

METALFLUID is suitable for the lubrication of metal casts (special forms for concrete shaping). The oil can be applied on metal casts by the use of brush or by spraying.

CHARACTERISTICS-BENEFITS

CHARACTERISTICS	BENEFITS
Excellent protection of metal casts from corrosion.	Economy of time and working.
Absolute smoothing of concrete's surface.	Clean concrete without fractures and patches.

PHYSICAL-CHEMICAL CHARACTERISTICS

METALFLUID	METHOD	
Density at 15°C, g/cm ³	ASTM D1298	0,8530
Viscosity, Kinematic (cSt) 40 ⁰ C	ASTM D445	30
Viscosity, Kinematic (cSt) 10 ⁰ C	ASTM D445	5,3
Flash point, COC, °C	ASTM D92	136
Viscosity Index	ASTM D2270	109
Pour point, °C	ASTM D97	-24

The above mentioned characteristics represent mean values.
